Kitchen innovation

Users make demands and the potential is huge

The demographic development shows that the number of senior citizens will continue to grow within the next 40 years. The number of citizens that has reached 65 years or older will grow by 81% up until the year 2045. And every 5th Dane has a health problem or a disability, and the number is growing. There is a great potential in listening to the users needs. The growing number of seniors and persons with or without disabilities place severe demands for their future surrounding. Not least in the kitchen where the users do not put up with anything.

Innovation in the kitchen

There will be multifunctional and height-adjustable tabletops that move simply by pressing a button. One of the most innovative ideas on the market is the Siemens Liftmatic oven. Here the roast or the buns will be lowered to an accessible height just by pushing a button. It suddenly becomes easy to access the food no matter if you are disabled or not. And the product appeals to a wide target group when function and good design comes together.

When innovation turns user driven

Knowledge about user needs is central when creating innovative and concise solutions. The Liftmatic oven concept connects user needs with new technology – and that creates new business opportunities. Rethinking and innovation make demands for intelligent technological solutions:

Since the beginning of 2006 KATAKA has cooperated with designers and engineers. Together we develop new designs on the basis of user needs linked to knowledge on technology and mechanisms.

Interdisciplinary cooperation and development

No matter if you are a designer, engineer, inventor or someone with great ideas for new products we would like to get in contact with you.

KATAKA is involved in interdisciplinary projects to develop future innovative products. Please see our website for further information: www.kataka.dk

We are looking forward to hearing from you.
